

[Listen: Chris Kinsinger, Proteomics Program Director, National Cancer Institute](#)

Season: 1

| Episode: 4

Data strategies are bringing together researchers to advance health science in areas like cancer.

Fri, 04/24/2020 - 16:14

In cancer research, technology that advances data sharing and management is crucial for bringing together the health research community to inform innovation in health care. Proteomics Program Director Chris Kinsinger provides a look at how systems are advancing efforts in proteomics for cancer research, with a look into his office's data commons and how it's helping bring data types together to help researchers solve problems at NIH.
