DevSecOps Event Recap: Optimizations in Workflows, Infrastructure and More

Sat, 12/05/2020 - 10:09

Disruptive DevSecOps
VIRTUAL EVENT
WATCH NOW
December 3, 2020
DevSecOps is proving to be a federal priority as agencies look to develop software faster, more agile and with security baked into the process. The framework is helping technologists optimize workflows through incorporation of advanced technologies like artificial intelligence. Leaders discuss the promise of operating on a DevSecOps model, how they've incorporated these functions in their processes to meet agency missions and how changing the culture to be more collaborative and progressive can improve overall efficiencies in IT modernization.

Federal leaders came together for our Disruptive DevSecOps virtual event Dec. 3. Speakers include those from the Air Force, Department of Homeland Security, NASA, Department of Veterans Affairs, Army Futures Command and Dell Technologies.
