**Industry Perspective: Dylan Conner, CTO, ID Technologies**

Conner challenges the status quo on emerging technologies shaping security.

Thu, 09/20/2018 - 22:21

In this chat, ID Technologies CTO Dylan Conner discusses how to best leverage expertise surrounding emerging technologies in the private sector and in government. He also discusses ways for government to use those emerging technologies, like AI and machine learning, to address the information security workforce gap and secure its networks. Finally, he addresses way that industry can help government agencies get the most value out of their cybersecurity funding to reduce their risk.
